Art Unit: 1742

DETAILED ACTION

Election/Restriction

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-20, drawn to an apparatus, classified in class 204, subclass 242.
 - II. Claims 21-26, drawn to an electrode, classified in class 204, subclass 280.
- 2. The inventions are distinct, each from the other because of the following reasons:

 Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not specify the structural support member, conductive layer, or the conductive bonding material. The subcombination has separate utility such as an electrode in an electroplating or electroetching cell.
- 3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/037,288 Page 3

Art Unit: 1742

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. During a telephone conversation with Alan Thompson on May 27, 2002, a provisional election was made **with** traverse to prosecute the invention of Group I, claims 21-26. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-20 have been withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Objections

6. Claim 22 is objected to because of the following informalities: the language "a third" is unclear. Perhaps Applicant could clarify or amend the claim to make it clear what is flowing through the aperture.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/037,288 Page 4

Art Unit: 1742

8. Claims 21-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Farmer (5,425,858).

Claim 21 is rejected because Farmer teaches an electrode comprising:

- a structural support member (Fig. 4B, numeral 40);
- a conductive layer formed on at least one surface at said support member (col. 10, lines 50-55: "titanium" and "structural support"); and
- a sheet of an electrosorptive medium secured to said conductive layer at contact locations comprising a surface area less than a total surface area of said sheet (col. 10, lines 56-60: "porous, conductive, monolithic material").

Claim 22 is rejected because Farmer teaches that said support member includes at least one aperture for allowing flow through said electrode (col. 10, lines 61-64 and Fig. 4B, numeral 47).

Claims 23-24 are rejected because Farmer teaches that the electrosorptive medium is secured to said conductive layer by a conductive bonding material such as an epoxy material (col. 10, lines 15-19).

Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/037,288 Page 5

Art Unit: 1742

10. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 11. Claims 25-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Farmer (5,425,858), and further in view of Andelman (5,547,581).

Farmer is as applied, argued, and disclosed above and incorporated herein but fail to specifically teach an insulator spacing screen between a first and second electrode.

Andelman teaches an insulator spacing screen between a first and second electrode (Fig. 1, numeral 12).

Claims 25-26 are rejected because it would have been obvious and within the ordinary skill in the art at the time the invention was made to have modified Farmer to include the insulator spacing screen between the electrodes as taught by Andelman because Andelman teaches an insulator spacing screen between a first and second electrode (Fig. 1, numeral 12) which would have reduced the overall size of the electrode structure thereby minimizing the footprint.

Art Unit: 1742

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wesley Nicolas whose telephone number is (703)305-0082. The examiner can normally be reached on Mon.-Thurs. from 7am to 5pm.

The Supervisory Primary Examiner for this Art Unit is Roy King whose telephone number is (703) 308-1146.

The fax number for this Group is (703) 872-9310.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0661.

Mesley A. Nicolas
